Job Title: Assistant Professor in Architecture, Planning and Design. Area of specialization in Architectural Education and Research: BIM, materials and construction

#### Position summary:

The Assistant Professor is a member of the faculty with an intermediate academic rank who has demonstrated a competence in teaching and research including scholarly publications. The Assistant Professor's teaching responsibilities are assigned by the academic department head which may include serving as an academic advisor. The primary purpose of this role is to engage in the supervision and mentorship of graduate students and to demonstrate advanced skills in scholarly activities and research.

#### Job description:

The School of Architecture, Planning and Design at Mohammed VI Polytechnic University invites applications for an Assistant Professor specialized in the area of BIM, materials and construction starting as soon as profile found. Qualified candidates at the Assistant Professor level will be considered with hiring rank commensurate with academic accomplishments.

The position is open to individuals who hold a Doctoral degree in the subject discipline from a recognized university. Preference will be given to those with advanced research and teaching experience. Good communication skills, both verbal and writing are important. Fluency in French and English are preferred.

### Key duties:

- Conduct studies of related literature and research to support the design and implementation of
  projects and development of reports, ensuring conceptual relevance, comprehensiveness, and
  currency of information.
- Write and publish articles in peer-reviewed journals/digests that highlight findings from research and experimental activities ensuring consistency with the standards of academic publication.

- Communicate to the research project team the development, progress and results of research activities ensuring that relevant information and issues in the implementation of projects/experiments are captured in as comprehensive and timely manner as possible.
- Develop collaborative links with the core scientific personnel in related program areas to gain exposure to, and build knowledge on experimental/research activities and approaches, in order to improve conceptual development and implementation.
- Design and organize databases along project frameworks and experimental research design that support overall research management, including the monitoring and evaluation of project inputs, actions, and outcomes, as well as the subsequent integration of these databases to other databanks;
- Identify areas of improvement within the research structure using integrated management approaches in pursuit of building/strengthening and the preservation of scientific rigor in research studies.
- Support if required, the development of proposals for research funding.

- PhD in the subject discipline
- Demonstrated understanding of operational requirements for a successful research project and managing resources.
- Proven ability to identify and fulfil the academic writing requirements for target publications.
- Proven ability of working with team members and PhD students to help build their research skill and knowledge and to support and guide their professional development.
- Ability to generate new ideas, links, and builds upon existing ideas to generate unique concepts and solutions.
- Demonstrated teaching skills
- Proven ability in the organization of seminars, workshops and conferences
